Labour Market Statistics – December 2009

Seasonally adjusted Labour Force Survey (LFS) data for Northern Ireland for the period August - October estimated an increase over the quarter in the number of employed persons, while there was a fall in the number of economically inactive and no change in the number of unemployed. The November Claimant Count showed an increase of 200 over the month.

In the latest reference period, the working age employment rate was estimated at 67.0%, up 1.2 percentage points over the quarter, but down 2.7 percentage points over the year.

The unemployment rate was 6.6%, down 0.2 percentage points over the quarter, but up 2.2 percentage points over the year. The NI rate remained below the UK rate of 7.9% and was also lower than the European Union (9.2%) and Republic of Ireland (13.0%) rates for September 2009.

The working age economic inactivity rate decreased by 1.1 percentage points over the quarter, but increased by 1.2 percentage points over the year to 28.2%. The NI working age economic inactivity rate (28.2%) remained the highest of the twelve UK regions (UK rate was 21.0%).

The LFS is a sample survey with an associated degree of sampling error (see table 1 overleaf for details).

The more recent claimant count measure for November was 54,000, up 200 over the month and up 19,300 over the year. This represented a year on year percentage increase of 55.6%, which was higher than the UK increase (49.0%) and second highest among the twelve UK regions. NI was one of only two UK regions that recorded an increase in claimants over the latest monthly period.

There were 393 confirmed redundancies in November 2009. This was higher than in October 2009 (219) and higher than November 2008 (262). The total number of confirmed redundancies in the last twelve months was 4,624, up 94% from the previous year (2,383).

The total number of employee jobs in Northern Ireland at September 2009 was 701,730 (Quarterly Employment Survey), down 5,010 jobs (-0.7%) over the quarter and 25,600 jobs (-3.5%) over the year.

NI seasonally adjusted data

	Reference period	Levels	Rates (%)	Levels	Rates (pps)
				Change on quarter

Labour Market

Statistical Press Release

Seasonally adjusted Labour Force Survey (LFS) data for Northern Ireland for the period August - October estimated an increase over the quarter in the number of employed persons, while there was a fall in the number of economically inactive and no change in the number of unemployed. The seasonally adjusted claimant count in November 2009 increased by 200 over the month to 54,000 and the Department was notified of 294 proposed redundancies in the latest reference period and 393 confirmed redundancies in November 2009.

Employment

The number of persons in employment in the period August - October was estimated at 760,000. This represented an increase of 13,000 over the quarter, but was down 25,000 over the year. The working age employment rate was estimated at 67.0%, up 1.2 percentage points over the quarter, but down 2.7 percentage points over the year. NI's working age employment rate remained well below the UK average (72.5%) and was the lowest of the twelve UK regions.

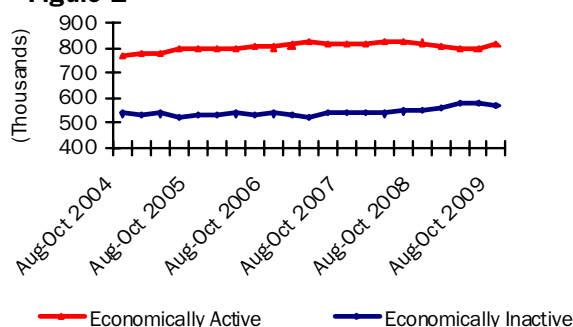

Unemployment

The unemployment rate for the period August - October was estimated at 6.6%, down 0.2 percentage points over the quarter, but up 2.2 percentage points over the year. The number of unemployed persons was estimated at 54,000, unchanged over the quarter, but up 18,000 over the year.

Unadjusted figures show that 36.2% of the unemployed have been unemployed for 1 year or more – up 3.7 percentage points over the year. They also estimate the unemployment rate

Seasonally Adjusted Labour Market Summary for Northern Ireland (16+)

Figure 1

for 18-24 year olds at 18.8% – up 5.8 percentage points over the year.

Economically Inactive

The seasonally adjusted number of economically inactive persons in the period August - October was estimated at 571,000. This figure has decreased by 9,000 over the quarter, but was up 20,000 over the year.

The working age economic inactivity rate for NI stands at 28.2%. This is significantly higher than the UK average rate (21.0%) and is the highest of the 12 UK regions.

Unadjusted figures show that while 90% of the inactive do not want work, the remaining 10% want employment but do not satisfy the full ILO job search criteria (by actively seeking work and being available to start a job). The number of economically inactive persons that want a job (55,000) is similar to the number officially classified as unemployed.

Northern Ireland Labour Market Summary (seasonally adjusted)

Table 1

	Period	Estimate	Sampling Variability of estimate	Change over year	Sampling Variability of change
Employment	Aug-Oct 2009	760,000	+/-22,000	-25,000	+/-28,000
Unemployment	Aug-Oct 2009	54,000	+/-10,000	18,000	+/-12,000
Economically inactive	Aug-Oct 2009	571,000	+/-20,000	20,000	+/-25,000
Unemployment rate	Aug-Oct 2009	6.6%	+/-1.2pps	2.2pps	+/-1.5pps
Employment rate ¹	Aug-Oct 2009	67.0%	+/-1.8pps	-2.7pps	+/-2.2pps
Economic inactivity rate ¹	Aug-Oct 2009	28.2%	+/-1.7pps	1.2pps	+/-2.2pps
Claimant Count	November 2009	54,000		19,300	

Note: pps = percentage points, ¹ Rates based on working age population (16-59/64), see Definitions for details.

Statistical Press Release

Estimates from the LFS have an associated degree of statistical error as they are based on a sample of the population. The annual changes for the main LFS categories of employment, unemployment and economic inactivity were tested for statistical significance. The results showed that the annual change in the unemployment and employment rates were statistically significant i.e. the recorded change exceeded the variability expected from a sample survey of this size (see table 1 and 'Definitions' for further details).

Unemployment Regional Comparison

The seasonally adjusted unemployment rate in NI (6.6%) remained below the UK average rate (7.9%) and was the joint second lowest rate among the twelve UK regions. The NI rate also compared favourably to the European Union rate (9.2%) and the Republic of Ireland rate (13.0%) for September 2009. However, the annual increase in the NI unemployment rate (+2.2 percentage points) was higher than the UK average (+1.9 percentage points) and was the third highest of the UK regions.

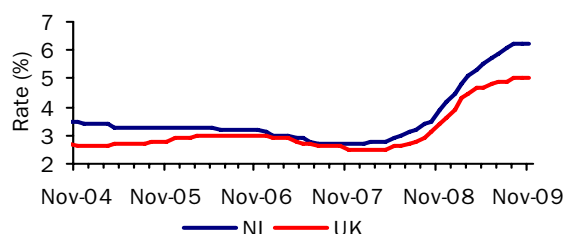

Claimant Count

The more recent seasonally adjusted claimant count increased by 200 over the month to November 2009 to 54,000 (6.2% of the workforce). The latest monthly increase was slightly higher than the revised increase recorded for the previous month (100). The increase over the year was 19,300 (55.6%) and the workforce rate has increased by 2.2 percentage points over the same period.

Claimant Count Regional Comparison

The seasonally adjusted claimant count rate in NI (6.2%) was higher than the UK average rate (5.0%) and was the third highest rate among the UK regions. Over the month to November 2009 the NI Claimant Count level increased by 0.4%, while the UK average decreased by 0.4%. Over the year the NI Claimant Count level increased by 55.6%, which was higher than the UK average (+49.0%) and was the second highest annual increase among the twelve UK regions.

Seasonally Adjusted Claimant Count Monthly Rates
Figure 2

Claimant count rates for District Council Areas

Figure 3 (unadjusted numbers as a percentage of the resident working age population) show that the highest rates at November 2009 were in Strabane (6.9%), Derry (6.8%), Limavady (6.4%) and Belfast (6.4%). Those that showed the highest percentage increase in levels over the year to November 2009 were Dungannon (92.1%), Armagh (90.0%) and Castlereagh (88.7%).

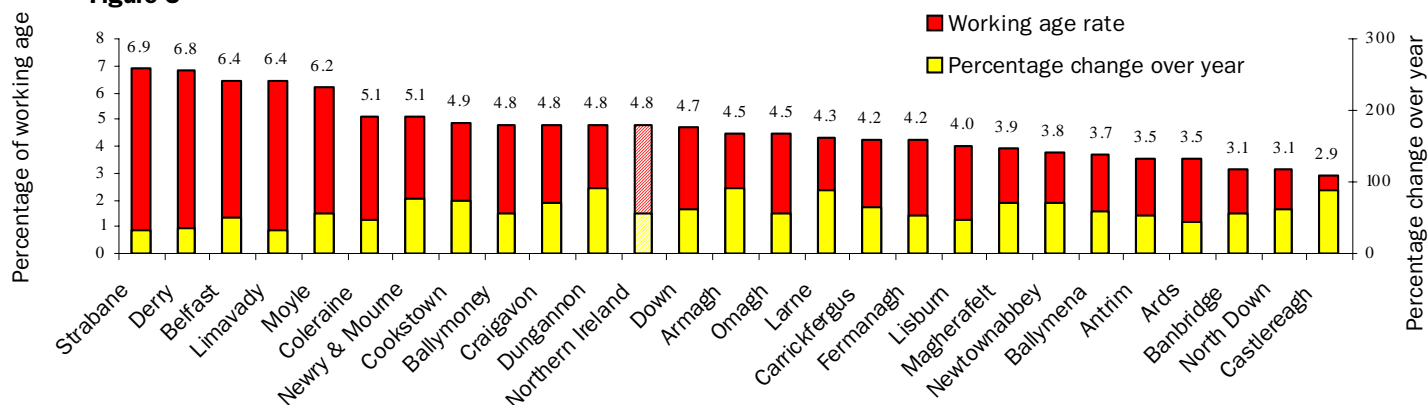

Employment and Training Measures

The Department for Employment and Learning (DEL) provides a number of services and programmes to help jobseekers find work. In September 2008 Steps to Work, the Department's new flexible approach to helping people to find work, was introduced in Northern Ireland and subsumes the main New Deal programmes. Overall, there has been an increase of 107.6% (4,235 persons) to 8,171 over the year to November 2009 in the number of those claimants who are eligible for mandatory participation on Steps to Work. However, anyone over 18 years old (or lone parents aged 16 years old or over) who is not working (or working less than 16 hours each week) is eligible. New Deal statistics are currently accessible via the DEL web link below - Steps to Work statistics will be published when data is available.

www.delni.gov.uk/index/statistics-and-research/labour-market/new-deal-statistics.htm

Unadjusted Claimant Count Rates By District Council Area

Figure 3

Statistical Press Release

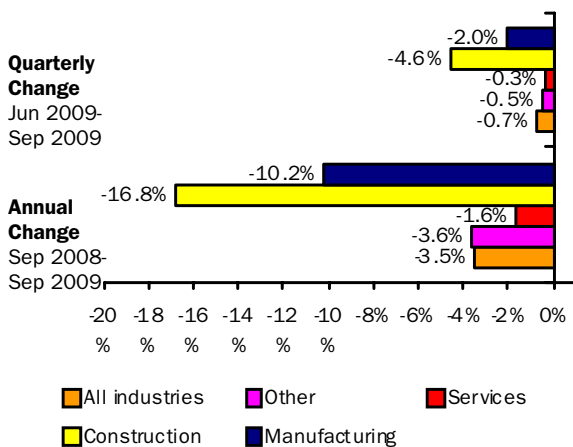

Redundancies

The Department was notified of 294 proposed redundancies over the period mid November 2009 to mid December 2009. This compares to 177 proposed redundancies notified to the Department in the previous monthly period. There were 393 confirmed redundancies in the month of November (Figure 5). Over the twelve monthly period there were a total of 4,624 confirmed redundancies, an increase of 94% from the previous year (2,383). The highest number of confirmed redundancies took place in Belfast District Council area which had 31.7% (1,465) of all redundancies over the year. Over the twelve monthly period there were a total of 5,772 proposed redundancies, an increase of 113% from the previous year (2,712). Since the start of 2009 to mid December there were a total of 5,506 proposed redundancies. Note that since all proposed redundancies do not actually take place, the confirmed total provides a better indication of real job losses.

Quarterly Employment Survey (QES)

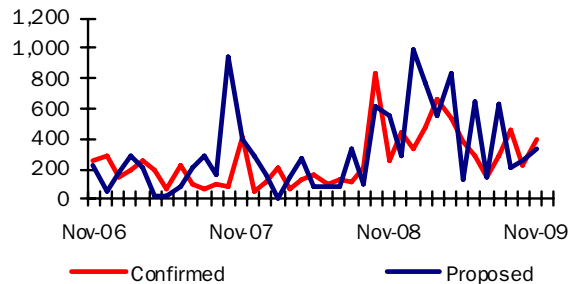

The QES provides an estimate of the number of jobs (rather than persons in employment) and is the preferred measure of change in employee jobs. The estimated seasonally adjusted employee jobs total in Northern Ireland at September 2009 was 701,730. This represents a decrease of 5,010 over the quarter and a decrease of 25,600 over the year.

Annual and Quarterly changes in employee jobs (seasonally adjusted)
Figure 4

The seasonally adjusted quarterly change consisted of decreases in Manufacturing (-1,540), in the Service sector (-1,640) and in Construction (-1,720).

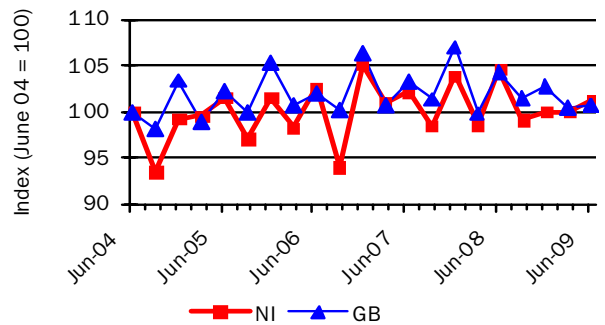

Confirmed and Proposed Redundancies November 06 - November 09
Figure 5

Hours Worked

The total workforce hours worked per week in Northern Ireland in June 2009 was estimated at 26.5 million hours, representing a decrease of 3.3% over the year (compared with a decrease of 3.4% in GB). Between June 2004 and June 2009, NI's total workforce hours worked per week increased by 1.2%, compared with a 0.8% increase in GB (Figure 6). In the three months to September 2009, the average actual weekly hours worked in NI was 31.9 hours, compared with 31.0 hours in the UK.

Index of total workforce hours worked per week, NI & GB
Figure 6

Source: Employment, Earnings and Productivity Division, ONS

Annual Survey of Hours and Earnings (ASHE)

Earning results for April 2009, which were released on 12th November 2009, show that yearly growth in median gross weekly earnings for all employees (i.e. both full- and part-time) in NI was 3.4% (to £356.7) compared to 2.2% in the UK (to £397.3). NI full-time employees' gross weekly earnings in April 2009 were £439.1, which was approximately 90% of the figure in the UK (£488.7). NI full-time earnings increased by 5.1% over the period, compared with an increase of 2.0% in the UK.

Full-time private sector median gross weekly earnings in NI increased at a marginally faster rate (1.6% to £383.0) than in the UK, where growth was 1.0% over the year (to £464.7). This represented little change in the NI/UK private sector pay gap, from 82.0% of the UK figure at April 2008 to 82.4% at April 2009.

¹ Employment and economic inactivity rates are based on working age population (16-59/64); Unemployment rates are based on 16+ population.

² Data refer to percentage point change of respective rate.

³ As at June 2009 (thousands).

⁴ As at November 2009: percentage of the workforce.

⁵ Not seasonally adjusted – data relates to 2007. Jobs Density – total number of jobs in an area divided by the resident population of working age in that area.

Statistical Press Release

DEFINITIONS

Notes to Table on Front Page

pps=percentage points

¹ Levels for all persons aged 16 and over, rates for working age (16-59 females, 16-64 males)

² People aged 16 and over. Unemployment rate=total unemployed as a proportion of the economically active

³ Quarterly Employment Survey

⁴ Seasonally adjusted. Rates are as a percentage of the total workforce.

⁵ Confirmed redundancies in the calendar month.

ILO Definition

The definition of unemployment used in the Labour Force Survey (LFS) is in accordance with that promulgated by the International Labour Organisation (ILO). The ILO unemployed include those without a job who were able to start work in the two weeks following their LFS interview and had either looked for work in the four weeks prior to interview or were waiting to start a job they had already obtained.

The definition of ILO employed applies to anyone (aged 16 or over) who has done at least one hour's paid work in the week prior to interview, or has a job they are temporarily away from (e.g. on holiday).

The ILO measures are particularly useful for examining short term and long term trends over time and key LFS time series data are available both seasonally adjusted and unadjusted. The key time series data also incorporates the latest mid year population estimates, however the more disaggregated 'microdata' has yet to be re-weighted to these totals (see link below for further details).

Sampling variability

The LFS is a sample survey, and as such, estimates obtained from it are subject to sampling variability. If we drew many samples each would give a different result. The ranges shown for the LFS data in table 1 represent 95% confidence intervals i.e. we would expect that in 95% of samples the range would contain the true value. These confidence intervals have been calculated using data that is unadjusted for seasonality, with the relevant sampling errors produced applied to the seasonally adjusted data.

If the 'annual change' for an estimate has increased or decreased by more than the 'sampling variability of the change', this change would be statistically significant. The annual change for both the unemployment and employment rate was statistically significant at the 95% level in August to October 2009. However, the annual change in

the economic inactivity rate was not statistically significant at this level.

Please see attached link for further LFS notes and definitions.

[Labour Force Survey Notes and Definitions](#)

LFS revision

In line with the practice for the rest of the UK, LFS data for Northern Ireland were revised last month. These revisions took place to incorporate the latest population estimates and the annual review of seasonal adjustment and date back to the three months starting June to August 2007.

The magnitude of the revisions were relatively small. Revisions to the seasonally adjusted unemployment rate fell within the range +/-0.1 percentage points. However, the range was higher for both the employment and economic activity rates (+/-0.5 percentage points).

More information on the revision policy concerning labour market statistics can be found through the link below:

[Labour market statistics revisions policy](#)

Claimant Count definition

Claimant Count figures are derived from records of claimants held at Social Security Offices. The term 'claimants' in the claimant count is used to include those who claim Jobseeker's Allowance (JSA) and National Insurance credits. The figures include severely disabled claimants, but exclude students seeking vacation work and the temporarily stopped. The Claimant Count is a very up-to-date measure of those eligible to claim a specific unemployment related benefit and data are available for a range of geographical sub-regions (e.g. District Council Areas, Parliamentary Constituency Areas, Travel-to-Work Areas and Wards). It also provides seasonally adjusted and unadjusted data and as a result is a useful measure for examining both short-term and long-term trends.

Seasonally Adjusted claimant count figures are provisional when published and subject to revision, mainly the following month and are only available at Northern Ireland level. Seasonally Adjusted totals are subject to an annual update (usually April) to take account of latest assessment trends.
